

MEGGER MIT515

MIT515 5Kv INSULATION RESISTANCE TESTER

Resistance measurement is available up to 10 TΩ. A key productivity feature is the ability to take measurements when connected to line power/mains with dead battery. Intelligent battery charging ensures the optimum charge rate as a function of battery level, resulting in minimum charge times.

Features

- CAT IV 600V.
- Mains or battery powered.
- Lithium-ion battery - extended capacity, rapid charge.
- Insulation Ranges: Analog 100kΩ to 10TΩ, and Digital 10kΩ to 10TΩ.
- Noise filter rejects up to 3mA noise for effective operation in electrically noisy environments.
- Date and time-stamped test results.
- 5% accuracy all the way up to 1 T-ohm at 5KV ensures highest accuracy where it matters most.
- Digital and Analog display backlit.
- Variable test voltages 250V, 500V, 1000V, 2500V, and 5,000V.
- Automatic IR, IR(t), DAR, PI.
- On Board memory for results storage.
